

TEN REASONS WHY THE LOGIC ENERGY IN-VEHICLE CHARGER (LEVC) IS YOUR BEST CHOICE

1. The radio holder is highly compact and can be installed in locations where other chargers won't fit.
2. The radio holder provides a precise and custom fit with the radio. This better secures the radio, prevents rattling, and accurately positions the battery relative to the charge contacts.
3. The radio holder is machined from a solid block of acetal plastic giving it excellent dimensional stability. There are no welds, seams, or thin walls that create weak points.
4. The high-impact contacts in the radio holder are military grade. They are highly robust, corrosion resistant, and maintain positive contact with the battery, even when a vehicle is traveling over rough roads.
5. The LEVC system is modular, which makes it easy and relatively inexpensive to update the charger should the user change radio models.
6. The tie-down strap effectively secures the radio and can be connected or released with one hand.
7. The radio holder can be fastened directly to a dash or by using the multi-directional mount included. The AMPS 4-hole pattern on the radio holder makes it compatible with (optional) heavy duty floor mounts, like the RAM-B-101U.
8. The LEVC is a multi-chemistry, rapid charger with proven charging technology.
9. The LEVC provides intelligent charging. It will not over charge a battery, allows charging when a radio is powered on, and will identify common battery defects.
10. The LEVC looks great in a vehicle. This is a charger that combines both style and functionality.

THE LEVC IS A FEATURE-RICH, BEST-IN-CLASS CHARGING SOLUTION.
